

Xporter Plugin for Atlassian - JIRA now supports OpenOffice files

Version 2.2.0 of Xporter plugin is already available! This new release **includes several compatibility improvements** and supports new input and output formats, thus becoming one of the most powerful plugins for exporting data using the Atlassian-JIRA platform.

The Xporter plugin allows JIRA users to directly export content, using predefined business templates. This update makes the plugin more complete and turns it into a reference tool for exporting data. Besides the output formats like PDF and DOCX, it now supports the following formats: Docm, dotx, dotm, SVG, PNG and ODT. Currently the plugin is used in several regions of the world and in leading international companies in areas such as Banking, Insurance or Travel & Leisure. This new version is already available and can be purchased or requested through Atlassian Marketplace or at the Xpand IT website.

The Xporter plugin offers you the ability to export data along with a customization component, all in an extremely simple and effective way. Project managers can export one or more JIRA issues and thus create their custom reports in few seconds, having the possibility of choosing the most convenient export formats. The plugin also allows you to define multiple templates so you can choose the most appropriate to each situation. Some of the most frequent cases are related to the production of documents: listing and changing requirements, product improvements, among many others.

"We want to thank our customers/users who have given us their suggestions for the plugin improvements. As a company focused on the market and customers, we tried to respond to their feedback. In this moment we can provide an exciting tool for customization and export data to the Atlassian – JIRA platform." Pedro Gonçalves – Chief Technology Officer at Xpand IT

As a company attentive to the market and feedback from our customers, we tried to respond to their comments. At this point we can provide the JIRA platform with a true benchmark tool for customization and export data". Pedro Gonçalves - Chief Technology Officer at Xpand IT.
